

ABSTRACT OF THE DISCLOSURE**Mold Cleaning Apparatus**

Mold cleaning apparatus (1) includes a manifold (5) adapted to be coupled to a
5 suction device. A first conduit (6) extends from the manifold (5) and has a first
opening (8) remote from the manifold. A second conduit (7) extends from the
manifold (5) and has a second opening (11) remote from the manifold (5). The
first and the second openings (8, 11) being directed in opposite directions, and
the first conduit (6) having a section (10) with a cross-sectional area which is
10 less than cross-sectional area at any point along the length of the second
conduit (7).
